

# 2.5-V INTEGRATED REFERENCE CIRCUIT

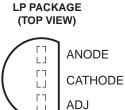

#### **FEATURES**

- Excellent Temperature Stability
- Initial Tolerance: 0.2% Max
- Dynamic Impedance: 0.6 Ω Max

- Wide Operating Current Range
- Directly Interchangeable With LM136
- Needs No Adjustment for Minimum Temperature Coefficient

NC - No internal connection

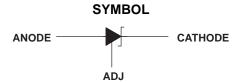

#### DESCRIPTION/ORDERING INFORMATION

The LT1009 reference circuit is a precision-trimmed 2.5-V shunt regulator featuring low dynamic impedance and a wide operating current range. The maximum initial tolerance is  $\pm 5$  mV in the LP package and  $\pm 10$  mV in the D and PW packages. The reference tolerance is achieved by on-chip trimming, which minimizes the initial voltage tolerance and the temperature coefficient,  $\alpha_{VZ}$ .

Although the LT1009 needs no adjustments, a third terminal (ADJ) allows the reference voltage to be adjusted ±5% to eliminate system errors. In many applications, the LT1009 can be used as a terminal-for-terminal replacement for the LM136-2.5, which eliminates the external trim network.

The LT1009 uses include 5-V system references, 8-bit analog-to-digital converter (ADC) and digital-to-analog converter (DAC) references, and power-supply monitors. The device also can be used in applications such as digital voltmeters and current-loop measurement and control systems.

The LT1009C is characterized for operation from 0°C to 70°C. The LT1009I is characterized for operation from –40°C to 85°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

# ORDERING INFORMATION(1)

T <sub>A</sub>	PAC	KAGE <sup>(2)</sup>	ORDERABLE PART NUMBER	TOP-SIDE MARKING

# ABSOLUTE MAXIMUM RATINGS(1)

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
$I_R$	Reverse current			20	mA
I <sub>F</sub>	Forward current			10	mA
		D package		97	
$\theta_{JA}$	Package thermal impedance (2)(3)	LP package		140	°C/W
		PW package		149	
TJ	Operating virtual junction temperature			150	°C
T <sub>stg</sub>	Storage temperature range		-65	150	°C

<sup>(1)</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

## **RECOMMENDED OPERATING CONDITIONS**

			MIN	MAX	UNIT
т	Operating free air temperature range	LT1009C	0	70	°C
1 A	Operating free-air temperature range	LT1009I	-40	85	

<sup>(2)</sup> Maximum power dissipation is a function of  $T_J(max)$ ,  $\theta_{JA}$ , and  $T_A$ . The maximum allowable power dissipation at any allowable ambient temperature is  $P_D = (T_J(max) - T_A)/\theta_{JA}$ . Operating at the absolute maximum  $T_J$  of 150°C can affect reliability.

<sup>(3)</sup> The package thermal impedance is calculated in accordance with JESD 51-7.

#### **ELECTRICAL CHARACTERISTICS**

at specified free-air temperature

	DADAMETED		AMETER TEST CONDITIONS		L	T1009C		LT1009I			UNIT
PARAMETER		IEST			MIN	TYP	MAX	MIN	TYP	MAX	ONIT
			D/PW package	25°C	2.49	2.5	2.51	2.49	2.5	2.51	
V	Reference voltage	I <sub>7</sub> = 1 mA	LP package	25 C	2.495	2.5	2.505	2.495	2.5	2.505	V
V <sub>Z</sub>	Reference voltage	12 = 1 111A	D/PW package	Full range	2.485		2.515	2.475		2.525	V
			LP package	Full range	2.491		2.509	2.48		2.52	
$V_{F}$	Forward voltage	$I_F = 2 \text{ mA}$	I <sub>F</sub> = 2 mA		0.4		1	0.4		1	V
	A divistment range	$I_Z = 1 \text{ mA},$ $V_{ADJ} = GNI$	O to V <sub>Z</sub>	25°C	125			125			mV
	Adjustment range	$I_Z = 1 \text{ mA},$ $V_{ADJ} = 0.6 \text{ V to } V_Z - 0.6$						45			IIIV
	Change in reference	D/PW package  LP package					5			15	
$\Delta V_{Z(temp)}$	voltage with temperature			Full range			4			15	mV
	Average temperature			0°C to 70°C		15	25		15	25	ppm/
$\alpha V_Z$	coefficient of reference voltage (2)	$I_Z = 1 \text{ mA},$	V <sub>ADJ</sub> = open	-40°C to 85°C					20	35	°C
۸۱/	Change in reference	I - 400 · A	to 10 m/	25°C		2.6	10		2.6	6	mV
$\Delta V_Z$	voltage with current	age with current $I_Z = 400 \mu A$ to 10 mA		Full range			12			10	IIIV
$\Delta V_Z/\Delta t$	Long-term change in reference voltage	I <sub>Z</sub> = 1 mA		25°C		20			20		ppm/ khr
7	Potoronoo impodonoo	1 - 1 m^		25°C		0.3	1		0.3	1	Ω
$Z_Z$	Reference impedance	ice I <sub>Z</sub> = 1 mA		Full range			1.4			1.4	12

- (1) Full range is 0°C to 70°C for the LT1009C and -40°C to 85°C for the LT1009I.
- (2) The deviation parameter V<sub>Z(dev)</sub> is defined as the difference between the maximum and minimum values obtained over the recommended operating temperature range, measured at I<sub>Z</sub> = 1 mA. The average full-range temperature coefficient of the reference voltage (αV<sub>Z</sub>) is defined as:

$$|\alpha V_z| \left(\frac{ppm}{{}^{\circ}C}\right) = \frac{\left(\frac{V_{z(dev)}}{V_z \text{ at } 25{}^{\circ}C}\right) \times 10^6}{\Delta T_A}$$
Maximum  $V_z$ 

$$Maximum V_z$$

$$V_{z(dev)} \text{ at } I_z = 1 \text{ mA}$$

 $\alpha V_Z$  can be positive or negative, depending upon whether the minimum  $V_Z$  or maximum  $V_Z$ , respectively, occurs at the lower temperature.

For example, at  $I_Z$  = 1 mA, maximum  $V_Z$  = 2501 mV at 30°C, minimum  $V_Z$  = 2497 mV at 0°C,  $V_Z$  = 2500 mV at 25°C,  $\Delta T_A$  = 70°C for LT1009C:

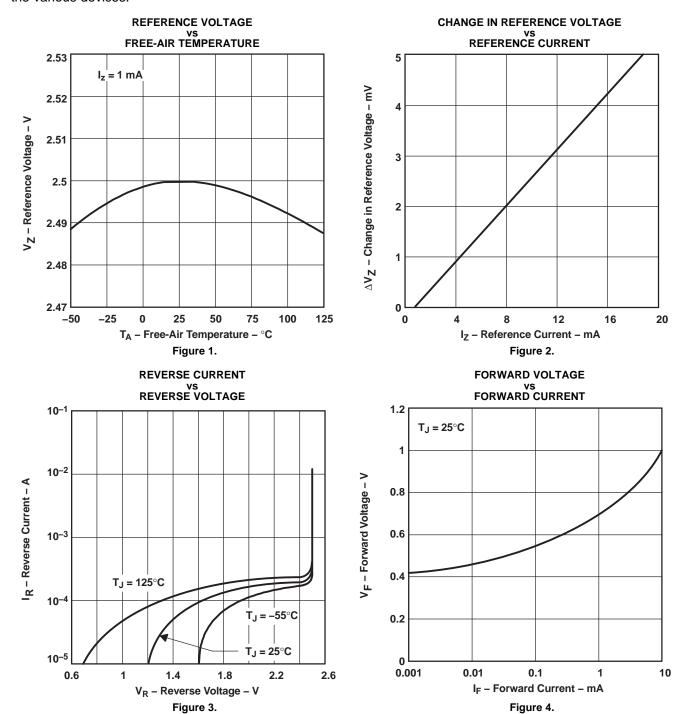

$$|\alpha V_z| = \frac{\left(\frac{4 \text{ mV}}{2500 \text{ mV}}\right) \times 10^6}{70^{\circ}\text{C}} \approx 23 \frac{\text{ppm}}{^{\circ}\text{C}}$$

Because minimum V<sub>7</sub> occurs at the lower temperature, the coefficient in this example is positive.

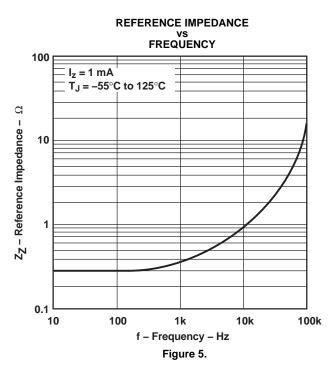

## **TYPICAL CHARACTERISTICS**

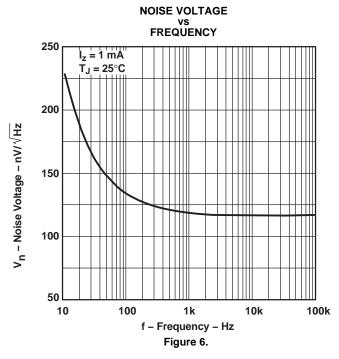

Data at high and low temperatures are applicable only within the rated operating free-air temperature ranges of the various devices.

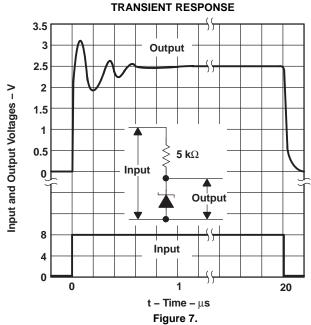

## **TYPICAL CHARACTERISTICS (continued)**

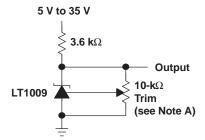

## **APPLICATION INFORMATION**

A. This does not affect temperature coefficient. It provides ±5% trim range.

<sup>(1)</sup> The marketing status values are defined as follows: **ACTIVE:** Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE**: TI has discontinued the production of the device.

## PACKAGE OPTION ADDENDUM

www.ti.com 8-Feb-2022

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

- (3) MSL, Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
