Type 70

# Sidac

(79 V to 330 V) RoHS

## General Description

The sidac is a silicon bilateral voltage triggered switch with greater power-handling capabilities than standard diacs. Upon application of a voltage exceeding the sidac breakdown voltage point, the sidac switches on through a negative resistance region to a low on-state voltage. Conduction continues until the current is interrupted or drops below the minimum holding current of the device.

Teccor's sidacs feature glass-passivated junctions to ensure a rugged and dependable device capable of withstanding harsh environments.

Variations of devices covered in this data sheet are available for custom design applications. Consult the factory for more information.

## Applications

- High-voltage lamp ignitors
- Natural gas ignitors
- Gas oil ignitors
- High-voltage power supplies
- Xenon ignitors
- Overvoltage protector
- Pulse generators
- Fluorescent lighting ignitors
- HID lighting ignitors

## Features

- RoHS Compliant
- AC circuit oriented
- Glass-passivated junctions
- High surge current capability

## Specific Test Conditions

$dI/dt$  — Critical rate-of-rise of on-state current

$dv/dt$  — Critical rate-of-rise of off-state voltage at rated  $V_{DRM}$ ;

$T_J \leq 100^\circ\text{C}$

$dV_{d}/dt$  — Critical rate-of-rise of turn-off voltage at 8 kHz

$I_{BO}$  — Breakover current 50/60 Hz sine wave

$I_{DRM}$  — Repetitive peak off-state current 50/60 Hz sine wave;  $V = V_{DRM}$

$I_H$  — Dynamic holding current 50/60 Hz sine wave;  $R = 100 \Omega$

$I_{T(RMS)}$  — On-state RMS current  $T_J \leq 125^\circ\text{C}$  50/60 Hz sine wave

$I_{TSM}$  — Peak one-cycle surge current 50/60 Hz sine wave (non-repetitive)

$$R_S = \frac{(V_{BO} - V_S)}{(I_S - I_{BO})} \quad 50/60 \text{ Hz sine wave}$$

$V_{BO}$  — Breakover voltage 50/60 Hz sine wave

$V_{DRM}$  — Repetitive peak off-state voltage

$V_{TM}$  — Peak on-state voltage;  $I_T = 1 \text{ A}$

## General Notes

- All measurements are made at 60 Hz with a resistive load at an ambient temperature of  $+25^\circ\text{C}$  unless otherwise specified.
- Storage temperature range ( $T_S$ ) is  $-65^\circ\text{C}$  to  $+150^\circ\text{C}$ .
- The case ( $T_C$ ) or lead ( $T_L$ ) temperature is measured as shown on the dimensional outline drawings in the "Package Dimensions" section of this catalog.
- Junction temperature range ( $T_J$ ) is  $-40^\circ\text{C}$  to  $+125^\circ\text{C}$ .
- Lead solder temperature is a maximum of  $+230^\circ\text{C}$  for 10 s maximum;  $\geq 1/16"$  (1.59 mm) from case.

## Electrical Specification Notes

- See Figure E9.5 for  $V_{BO}$  change versus junction temperature.
- See Figure E9.6 for  $I_{BO}$  versus junction temperature.
- See Figure E9.2 for  $I_H$  versus case temperature.
- See Figure E9.13 for test circuit.

(5) See Figure E9.1 for more than one full cycle rating.

(6)  $T_C \leq 90^\circ\text{C}$  for TO-92 Sidac

$T_C \leq 105^\circ\text{C}$  for TO-202 Sidacs

$T_L \leq 100^\circ\text{C}$  for DO-15X

$T_L \leq 90^\circ\text{C}$  for DO-214

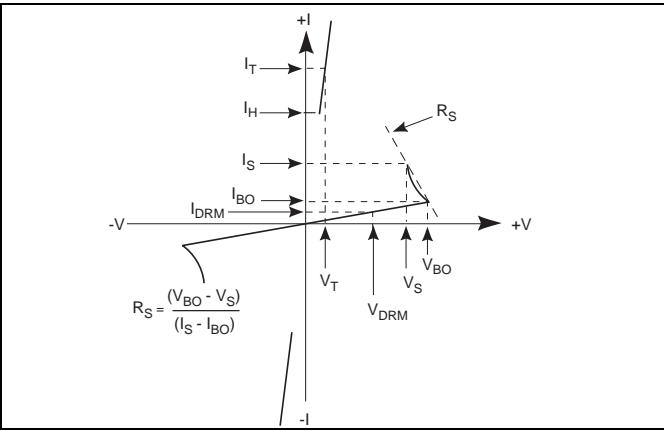

(7) See Figure E9.14 for clarification of sidac operation.

(8) For best sidac operation, the load impedance should be near or less than switching resistance.

(9) See package outlines for lead form configurations. When ordering special lead forming, add type number as suffix to part number.

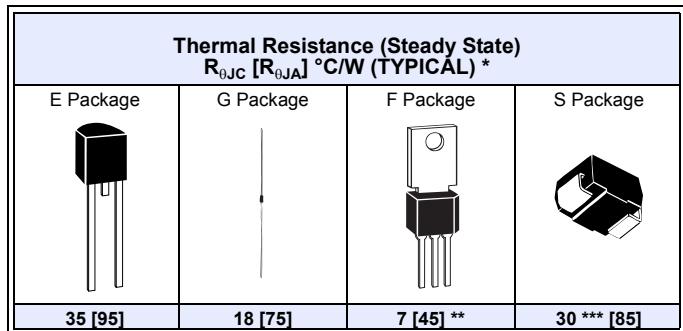

(10) Do not use electrically connected mounting tab or center lead.

(11) The K2401F1 sidac is designed to ensure good commutation at higher switching frequencies, as required in ignitor circuits for high intensity discharge (HID) lighting. A typical circuit for a metal halide lamp ignitor is shown in Figure E9.17. With proper component selection this circuit will produce three pulses for ignition of Osram lamp types such as HQI-T70W, HQI-T150W, and HQI-T250W which require a minimum of three pulses at 4 kV magnitude and  $>1 \mu\text{s}$  duration each at a minimum repetition rate of 3.3 kHz.
