
FEATURES

- Constant Power design, off-line programmable;
- Dual Mode:Constant Current and Constant Voltage;
- 4 in 1 dimming: 0(1)-10V dimming, PWM, RX, Timer dimming;
- Dim-to-Off;
- Surge protection: DM: 6KV, CM: 10KV;
- Multi-Protections: SCP/OVP/OTP/OLP ;
- 12V/200mA auxiliary power optional;
- IP67;
- 5 years warranty.

INTRODUCTION

F1-200 series is 200W current adjustable LED intelligent led driver, which integrated dual-modes of constant voltage and constant current. Its input voltage range is 90-305VAC, with high efficiency, high power factor, high surge protection and other performance indicators. This series of products have strong compatibility, the output parameters can be offline programmable. The integrated housing meets the protection requirements of IP67 which is suitable for harsh outdoor application environment. High power density and compact size design. Multiple protection designed which including surge protection, over voltage protection, short circuit protection and over temperature protection to ensure the barrier-free operation of this product.

F1 series can be used in LED street lights, tunnel lights, shoebox lights, industrial high bay lights, horticulture lights and landscape lighting applications.

NOTES:

[1] X=N， V, B or D， N=Non-dimming function,B=3-in-1 dimming function, V=I.out adjustable potentiometer, D=DALI. YYY=A12 means 12V/0.2A Auxiliary power.

[2] The working mode can be set by offline programmer for V.out lower than 56V models. For details, see the Programmer Operation Instructions. The default factory setting is constant current working mode.

[3]Unless specify noted, all performance parameters are typically measured at 25 ° c, 230Vac input, full load.

Timer Dimming	Maximum 7 periods can be set，10-100% dimming，see "Timer dimming" for detail.
Programmable Current Output Range	The range of nominal current can be adjusted by controller programming; The total output power exceeds the Max. power (actual output voltage * actual output current=power), which cannot be covered by the warranty.
Protective Function	
Input Over Voltage Protection	When the AC input voltage exceeds 330V, it will stop working, and the voltage will automatically recover when the voltage drops below 305V (optional function)
Output Over Voltage Protection	When the product exceeds the limit range, it enters the protected state. After the fault is removed, the product will resume working state.
Dimming Over Voltage Protection	When the dimming wires is wrongly connected to 230Vac, the product enters the protection state. When the fault is eliminated or the machine is restarted, the power supply returns to normal operation (optional function)
Open Circuit Protection	When the LED is open-circuited, the product will enter the protection state, such as burping or clamping at the highest output voltage state, and the product will not be damaged. When the fault is eliminated or the power is restarted, the power supply will return to normal operation.
Short Circuit Protection	When the output is short-circuited, the input power will be reduced accordingly. After the short-circuit condition is removed, the power supply will automatically return to normal.
Over Temperature Protection	Drop current mode. When the over temperature is removed, the current will automatically resume.
Environmental Conditions	
Operating Temperature	-40℃ ~ +90℃ (T case)
Humidity	10% - 90% RH, (not condensed)
Storage Temperature	-40℃ to +75℃
Storage Humidity	10% - 90%RH, Non-condensing (sea level to 2000 meters)
Vibration	10 - 500Hz X, Y, Z vertical axes vibrate at a constant acceleration of 1.0G (depth 3.5mm) for 1 hour
Degree Of Protection	IP67 (IP65 for Type V)

Reliability	
Lifespan	≥5 years H@230Vac, 100% load. See Life Cycle and Tc Curves for details

NOTES

1. It is recommended that customers install over-voltage protection and surge protection devices in the power supply circuit of lamps to ensure the safety of electricity use.
2. The power supply is used as a component of the whole lamp in combination with the terminal equipment. Because the EMC performance is affected by the LED lamps and wiring, the terminal equipment manufacturing,The manufacturer needs to re-confirm the EMC of the whole device.
3. Please use a special programmer to adjust the current of the power supply, and program and write through the dimming light.
4. When adjusting the output current of the power supply, please ensure that the total output power does not exceed the rated maximum power.
5. Unless otherwise specified, the above parameters are the test results under the conditions of ambient temperature 25℃, humidity 50%, 100% load, and input voltage 230Vac.

NOTES:

1. The LED Driver itself meets with EMC standard. However, LED Driver's EMC should be re-checked when integrated into lighting systems due to unexpected interference as component.
2. Please short L and N, LED+ and LED-, Dim+ and Dim - when Hi-pot test.
3. The CCC withstand voltage test needs to disconnect the built-in lightning protection tube.According to the IEC 60598-1:14 standard section 10.2, the “built-in lightning protection tube” can be marked on the nameplate to disconnect the discharge tube on testing.

Installation considerations

1. The lightning protection level of the power supply meets the standard requirements of IEC61000-4-5 and other countries. If it is used in lightning-prone areas or areas with relatively complex power grid environment, it is recommended to install a professional lightning protection module on the AC input end of the power supply.
2. Please insulate and waterproof the dimming cable when it is not in use
3. The voltage-withstand of LED chip and Aluminum PCB >3KV
4. Safety space between Aluminum PCB and LED coppers >5mm.
5. The safety distance between LED+ and LED- on Aluminum PCB>1.8mm
6. Minimize copper on Aluminum PCB to reduce junction capacitance and leakage current
7. LED chip is recommended to be designed in parallel first and then in series
