

FEATURES

- Constant Power design, off-line programmable;
- Dual Mode:Constant Current and Constant Voltage;
- 4 in 1 dimming: 0(1)-10V dimming, PWM, RX, Timer dimming;
- Dim-to-Off;
- Surge protection: DM: 6KV, CM: 10KV;
- Multi-Protections: SCP/OVP/OTP/OLP;
- 12V/200mA auxiliary power optional;
- IP67;
- 5 years warranty.

INTRODUCTION

F1-320 series is 320W current adjustable LED intelligent led driver, which integrated dual-modes of constant voltage and constant current. Its input voltage range is 90-305VAC, with high efficiency, high power factor, high surge protection and other performance indicators. This series of products have strong compatibility, the output parameters can be offline programmable. The integrated housing meets the protection requirements of IP67 which is suitable for harsh outdoor application environment. High power density and compact size design. Multiple protection designed which including surge protection, over voltage protection, short circuit protection and over temperature protection to ensure the barrier-free operation of this product.

F1 series can be used in LED street lights, tunnel lights, shoebox lights, industrial high bay lights, horticulture lights and landscape lighting applications.

KEY PARAMETERS

Max Model ^[1] Powe		Working '	V.out I.out	l.out Adjustable	I.out Full Power	Default Output	Typ. Efficiency ^[3]		Typ. PF	
	(W)	mode ^[2]	(Vdc)	range(A)	range(A)	Current (A/Vdc)	120Vac	230Vac	120Vac	230Vac
F1-320X-056YYY	220	C.C	27-56	4.00-9.00	5.70-9.00	5.0/48	92%	93%	0.98	0.97
F1-32UX-U56YYY	320	C.V	36-56	/	0-9.00	0-6.67/48	92%	93%	0.98	0.97
F1-320X-112YYY	320	C.C	62-112	2.70-3.60	2.80-3.50	2.80/112	92%	94%	0.98	0.97
F1-320X-228YYY	320	C.C	114-228	1.30-2.20	1.40-2.10	1.40/228	92%	94%	0.98	0.97

NOTES:

- [1] X=N, V, B or D, N=Non-dimming function, B=3-in-1 dimming function, V=I.out adjustable potentiometer, D=DALI. YYY=A12 means 12V/0.2A Auxiliary power.
- [2] The working mode can be set by offline programmer for V.out lower than 56V models. For details, see the Programmer Operation Instructions. The default factory setting is constant current working mode. [3]Unless specify noted, all performance parameters are typically measured at 25 ° c, 230Vac input, full load.

TECHNICAL DATA

Input Characteristics			
Rated Input Voltage	100-277Vac		
Input Voltage Range	90-305Vac		
Input Frequency	47~63Hz		
Input Current (Typ.)	3.50A @100-277Vac , 100% load		

H1-800 Series Programmable LED Driver

Standby Power Consumption	0.5W Max. @120Vac Dimming shutdown
Inrush Current	75A Max.@ 230Vac, 25℃ cold start
Power Factor (Typ.)	PF>0.95 @ 100-240Vac ,100% load
Nominal Input Voltage	THD<15% @ 100-240Vac,100% load
Output Characteristic	S
Current Accuracy	± 5%
Efficiency	92% @120 Vac & full load, 94% @230Vac & full load (typ. value)
Output Voltage	Refer to "KEY PARAMETERS"
No Load Output Voltage F1-320X-056YYY F1-320X-112YYY F1-320X-228YYY F1-320X-430YYY	60Vdc Max. 117Vdc Max. 251Vdc Max. 473Vdc Max.
Ripple Current	<5%
Line Regulation	3%
Load Regulation	3%
Turn-On Delay Time	0.5S Max. @ 230VAC / 1.0S Max. @120VAC
Timer Dimming	Maximum 7 periods can be set, 10-100% dimming, see "Timer dimming" for detail.
Programmable Current Output Range	The range of nominal current can be adjusted by controller programming; The total output power exceeds the Max. power (actual output voltage * actual output current=power), which cannot be covered by the warranty.
Protective Function	
Input Over Voltage Protection	When the AC input voltage exceeds 330V, it will stop working, and the voltage will automatically recover when the voltage drops below 305V (optional function)
Output Over Voltage Protection	When the product exceeds the limit range, it enters the protected state. After the fault is removed, the product will resume working state.
Output Over Voltage	When the product exceeds the limit range, it enters the protected state. After the fault is removed, the product will resume working state. When the dimming wires is wrongly connected to 230Vac, the product enters the protection state. When the fault is eliminated or the machine is restarted, the power supply returns to normal operation (optional function)
Output Over Voltage Protection Dimming Over Voltage	After the fault is removed, the product will resume working state. When the dimming wires is wrongly connected to 230Vac, the product enters the protection state. When the fault is eliminated or the machine is
Output Over Voltage Protection Dimming Over Voltage Protection	After the fault is removed, the product will resume working state. When the dimming wires is wrongly connected to 230Vac, the product enters the protection state. When the fault is eliminated or the machine is restarted, the power supply returns to normal operation (optional function) When the LED is open-circuited, the product will enter the protection state, such as burping or clamping at the highest output voltage state, and the product will not be damaged. When the fault is eliminated or the power is
Output Over Voltage Protection Dimming Over Voltage Protection Open Circuit Protection	After the fault is removed, the product will resume working state. When the dimming wires is wrongly connected to 230Vac, the product enters the protection state. When the fault is eliminated or the machine is restarted, the power supply returns to normal operation (optional function) When the LED is open-circuited, the product will enter the protection state, such as burping or clamping at the highest output voltage state, and the product will not be damaged. When the fault is eliminated or the power is restarted, the power supply will return to normal operation. When the output is short-circuited, the input power will be reduced accordingly. After the short-circuit condition is removed, the power supply
Output Over Voltage Protection Dimming Over Voltage Protection Open Circuit Protection Short Circuit Protection Over Temperature	After the fault is removed, the product will resume working state. When the dimming wires is wrongly connected to 230Vac, the product enters the protection state. Size	L225*W67.5*H40mm		
Weight	920 ± 100 g		
Package	L425mm*W310mm*H225mm 16PCS/Ctn, Gross Weight: 15.3Kg ± 10%		

NOTES

- 1. It is recommended that customers install over-voltage protection and surge protection devices in the power supply circuit of lamps to ensure the safety of electricity use.
- 2. The power supply is used as a component of the whole lamp in combination with the terminal equipment. Because the EMC performance is affected by the LED lamps and wiring, the terminal equipment manufacturing, The manufacturer needs to re-confirm the EMC of the whole device.
- 3. Please use a special programmer to adjust the current of the power supply, and program and write through the dimming light.
- 4. When adjusting the output current of the power supply, please ensure that the total output power does not exceed the rated maximum power.
- 5. Unless otherwise specified, the above parameters are the test results under the conditions of ambient temperature 25 $^{\circ}$ C, humidity 50%, 100% load, and input voltage 230Vac.

DIMMING FEATURES

Dimming type	Parameter	Min.	Тур.	Max.	Remark
	Signal level	0V	-	10V(5V)	Max Voltage no more than 12Vdc(6Vdc)
0-10V(5V) ^[4] Positive	Dimming range	10%	-	100%	Percentage of Output current programmed
logic	Shutdown level	0.7V	0.8V	0.9V	
	Turn on level	0.9V	1.1V	1.35V	
10V(5V)-0	Signal level	10V(5V)	-	0V	Max Voltage no more than 12Vdc(6Vdc)
Negative	Dimming range	10%	-	100%	Percentage of Output current
logic	Shutdown level	-	-	-	
	Turn on level	0.9V	1.1V	1.35V	
	High level	9.7V	-	10.3V	
	Low level	0V	-	0.3V	
PWM	Frequency	200Hz	1KHz	2KHz	
	Dutusuala	5%	-	100%	Positive logic dimming
	Duty cycle	100%	-	5%	Negative logic dimming
Dimming	Resistance	10kΩ	-	100kΩ	
resistor	Dimming range	10%	-	100%	Positive logic dimming

Note [4]: The signal amplitude is set to 10V by default, or 5V as required.

NOTES:

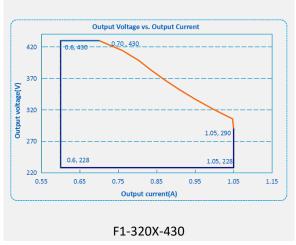

- 1. The LED Driver itself meets with EMC standard. However, LED Driver's EMC should be re-checked when integrated into lighting systems due to unexpected interference as component.
- 2.Please short L and N, LED+ and LED-, Dim+ and Dim when Hi-pot test.
- 3. The CCC withstand voltage test needs to disconnect the built-in lightning protection tube. According to the IEC 60598-1:14 standard section 10.2, the "built-in lightning protection tube" can be marked on the nameplate to disconnect the discharge tube on testing.

Installation considerations

- 1. The lightning protection level of the power supply meets the standard requirements of IEC61000-4-5 and other countries. If it is used in lightning-prone areas or areas with relatively complex power grid environment, it is recommended to install a professional lightning protection module on the AC input end of the power supply.
- 2. Please insulate and waterproof the dimming cable when it is not in use
- 3. The voltage-withstand of LED chip and Aluminum PCB >3KV
- 4. Safety space between Aluminum PCB and LED coppers >5mm.
- 5. The safety distance between LED+ and LED- on Aluminum PCB>1.8mm
- 6. Minimize copper on Aluminum PCB to reduce junction capacitance and leakage current
- 7. LED chip is recommended to be designed in parallel first and then in series

REVISION HISTORY
