

We are family...

Magnetic Card Reader 868 RS232/USB

Hybrid Card Reader 868 TTL/RS232/USB

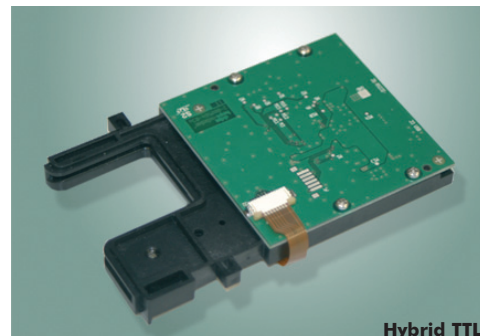

You want everything but have no space?

Well we offer you with our new card reader family 868 the right solution. Minimized overall height, simple assembly and fixation, high service life mark this series.

With it not enough: you may choose by the modular design between: only magnetic track device, with the choice of 1-track, 2-track or 3-track versions (according to ISO 7810) - as chip only- or hybrid solution.

In each case with TLL, RS232 (EMV 4.0 level 1 homologated) or USB interface. Or you might as well develop with us your own electronic board directly on our modules.

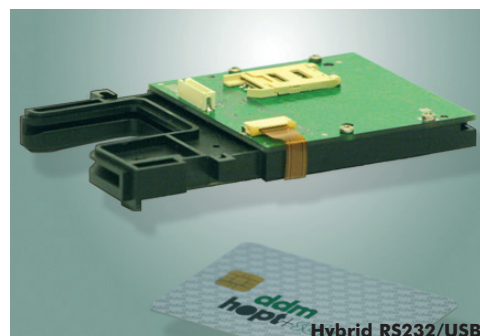

Name us your application and we name you our family member which fits into your application.

...with relatives!

Metal Bezel for 868

Plastic Bezel for 868

This **bezel** made of **metal** is especially well suitable for operation in the outdoor area. It is vandalism proofed, easy to integrate into front panels and upon request available in special custom colours.

Reasonable and likewise simply to adopt is the **bezel** made of **plastic**. Insertion bevels for the card and a preferably wide clearance within the reaching area mark this bezel. If desired we are also able to apply pictograms in different procedures on the surface.
